PROFESSIONAL SUMMARY

Full-stack developer specializing in ASP.NET Core, Next.js, and React, with practical experience building responsive, multilingual web applications, REST APIs, and database-driven systems. Combines maintainable frontend architecture with secure backend development, authentication, authorization, and data access. Experienced in collaborating with cross-functional Agile teams to turn business requirements and UI designs into tested, reliable features, with the goal of growing into a well-rounded software engineer who delivers meaningful business solutions.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL

Frontend & Full-Stack Web: Next.js, React, React Router, HTML, CSS, Tailwind CSS, Material UI, shadcn/ui, TanStack Query, Zustand, React Hook Form, Zod

Backend & APIs: ASP.NET Core Web API, ASP.NET Core Minimal APIs, NestJS, Express.js, ASP.NET Core Identity, JWT Authentication, REST API Design

Data Access: Entity Framework Core, ADO.NET, MongoDB

Databases: SQL Server, PostgreSQL, MongoDB, Oracle, SQLite

Architecture & Principles: Feature-Based Architecture, Backend for Frontend (BFF), Clean Architecture, Vertical Slice Architecture, Modular Monolith, Layered Architecture, MVC, OOP, SOLID Principles, Dependency Injection

Localization & UI: next-intl, i18next, Responsive Web Design, RTL/LTR Layouts

Development Tools & Quality: Git, GitHub, Postman, ESLint, Prettier, Husky

Project Workflow: Agile/Scrum, ClickUp, User Stories, Sprint Planning, Code Reviews

Additional Technologies: Bootstrap, jQuery, Windows Forms

PROFESSIONAL EXPERIENCE

Frontend Developer Intern — DIGIT Innovation Hub

July 2026 – Present · Hybrid · Damascus, Syria

- Took ownership of the frontend development of Digit Management System, working within a cross-functional team that included a product manager, UI/UX designer, backend developer, and QA tester.
- Developed the application using Next.js and TypeScript, supported by a feature-based architecture and a Backend-for-Frontend pattern for maintainable API integration.
- Translated Figma designs into responsive, role-aware, and bilingual workflows for managing events, rooms, bookings, calendars, attendees, and administrative operations.
- Collaborated with the product manager through ClickUp to refine user stories, plan sprint work, track progress, and review completed features against business requirements.
- Coordinated with the NestJS backend developer and QA tester to integrate APIs, investigate defects, address testing feedback, and validate features against acceptance criteria.
- Followed an Agile/Scrum delivery process involving sprint planning, daily stand-ups, sprint reviews, and a GitHub workflow across development, staging, and production branches.

PROJECTS

Digit Management System — Professional Team Project

Next.js · TypeScript · App Router · TanStack Query · Tailwind CSS · shadcn/ui

- Developed the frontend of a web-based management system for Digit Center within a cross-functional product team.
- Applied a feature-based architecture and Backend-for-Frontend pattern to organize business features and centralize communication with the NestJS API.
- Delivered responsive, role-aware workflows for events, rooms, bookings, calendars, attendees, and administrative operations.
- Implemented authentication and session flows, protected routes, permission-based interfaces, validated forms, server-state management, and English/Arabic localization.

AutoNest — Next.js Edition

Next.js · TypeScript · MongoDB · Mongoose · Better Auth · Cloudinary · Resend

- Reimplemented the AutoNest vehicle marketplace as a full-stack Next.js application to explore the same business domain using a TypeScript and MongoDB stack.
- Implemented authentication and role-aware access with Better Auth and its MongoDB adapter.
- Integrated Cloudinary for vehicle-image management and Resend for transactional email delivery.
- Built validated forms and application state using React Hook Form, Zod, and Zustand, with English and Arabic localization support.

Dar Al-Fajr Publishing Platform — Frontend Prototype

Next.js · TypeScript · Material UI · Laravel API

- Developed an initial frontend prototype for Dar Al-Fajr, a publishing house specializing in Qurans and Islamic books.
- Used the prototype to explore and validate the proposed interface, content presentation, and primary user workflows before production development.
- Built responsive, content-focused screens with Next.js, TypeScript, and Material UI, structured for integration with an existing Laravel API.
- Implemented reusable interface patterns, forms, state handling, and multilingual layout support suitable for a content-rich publishing platform.

AutoNest — Vehicle Marketplace and Management Platform

ASP.NET Core · React · TypeScript · SQL Server · Entity Framework Core · ASP.NET Core Identity

- Co-developed a graduation project that earned 97/100, the highest graduation-project grade in the cohort.
- Built a role-based marketplace where customers discover, favorite, rent, and purchase vehicles; companies manage inventory and requests; and administrators manage accounts, plans, and platform rules.
- Structured the backend into API, business, and data-access layers, with JWT authentication, server-enforced authorization, DTO-based API boundaries, and Entity Framework Core persistence.
- Implemented scheduled Hangfire workflows and automated business, API-integration, route-protection, and frontend tests.

EDUCATION

Bachelor of Engineering in Information Technology

Syrian Virtual University · October 2023 – Expected October 2029

Associate Degree in Computer Software Engineering

Damascus University · October 2023 – Expected February 2027

Graduation Project: AutoNest Vehicle Sales and Rental Platform

- Developed a full-stack platform for vehicle sales and rentals as part of the graduation project.
- Achieved a grade of 97/100, the highest graduation-project grade in the cohort.
- Applied system analysis and software-engineering practices, including requirements analysis, ER diagrams, use-case diagrams, sequence diagrams, and database design.

Relevant Coursework: Object-Oriented Programming, Data Structures and Algorithms, Systems Analysis, Software Engineering, Database Systems, and Web Application Development

Technologies Covered: C#, ASP.NET MVC, Entity Framework Core, ADO.NET, Windows Forms, HTML, CSS, JavaScript, Bootstrap, jQuery, SQL Server, and Oracle

LANGUAGES

Arabic: Native

English: Professional working proficiency
